Notes:	1
Separate Task Boards	1
Coordinates	1

Notes:

This document may undergo more revisions as we do dry runs in preparation for test week. EV Teams will have their own map regarding the Rock Yard and relative coordinates. See **documents/maps/** for this. Due to the limited size of the Rock Yard and the refactorization of DUST for the 2025-26 Challenge, **the following coordinates will be constant and may not line up with the search coordinates for the PR Team.** This is intended and should not be an issue since interoperability is not an aspect of this year's challenge.

Change Log:

1. Create initial document. -RE 3-5-26
2. Add minor statement about teams knowing which LTV Task Board they will have. -RE 3-6-26

Separate Task Boards

Due to scheduling needs for the 2025-26 SUITS Challenge, some teams may run concurrently with another similar team, i.e. two EV teams doing their test at the same time. This requires the implementation of two LTV Task Boards placed at different locations within the Rock Yard and will be distinguished as Task Board Alpha and Bravo respectively. Teams will know exactly which Task Board will correspond to their test during Test Week.

Coordinates

All coordinates follow the same units found in the TSS (meters) and are approximations accurate to within 10 meters. Exact coordinates may vary slightly during Test Week:

Location Name	X Coordinate	Y Coordinate
HAB (Egress/Ingress Point)	-5670	-10060
LTV Task Board Alpha	-5635	-9960
LTV Task Board Bravo	-5615	-9995
